MicroPro[®] Treated Agricultural Use Timbers

The Agricultural Rounds, Posts and Rails you can rely on.

Proven Ability

- Timber is sourced from sustainably managed plantations
- New Generation Timber Preservative which is Global GreenTag™ Certified
 - Low toxicity and VOC levels
 - Life Cycle analysis - Greenhouse Gas, including carbon footprint
- Australian Standards compliant
- Reliable supply and great value

Timber is The Ultimate Renewable™

OneFortyOne timber products are sourced from sustainable and renewable plantation forests making timber a great choice for agricultural posts and fencing.

The lifespan of timber is extended significantly by treatment with the new generation MicroPro® timber preservative which has been developed by Koppers Performance Chemicals.

MicroPro® uses micronized copper azole preservatives to penetrate the timber which leads to a number of important benefits for users of the treated wood products, including the improved environmental and safety profile when compared to traditional wood preservative products.

MicroPro® technology is a non arsenic based preservative treatment process. MicroPro® can also include a micronized colour pigment system to produce a long lasting warm red-brown colour similar to local and imported hardwoods and is marketed as MicroPro® Sienna®.

MicroPro® technology is the first treated wood process to be EPP (Environmentally Preferable Product) certified by Scientific Certification Systems based on a Life-Cycle Assessment.

After undergoing an independent third-party assessment process by world-leading product certification body Global GreenTag International, the MicroPro® technology has received the highest rating under Global GreenTag's GreenRate™ product sustainability certification system. MicroPro® technology has also been awarded a Global GreenTag GoldHEALTH™ HealthRate™ certification under the GreenTag PHD™ (Product Health Declaration™) program, demonstrating the safety and healthiness in use of the wood treatment product.

Sourced from sustainable plantation forests, you cannot beat OnefortyOne's MicroPro® and MicroPro® Sienna treated wood products for timber posts and fencing.

MicroPro® roundwood posts and droppers

Product	Diameter	Treatment	1.07m	1.17m	1.8m	2.1m	2.4m	2.7m	3.0m
